

## VA114K, Duck, Vacuumlifter, 4 pads, 400 kg.

Battery machine with 4 pads over a length of 2 mtr.

When the machine is on the glass plate, they are about 300 mm wide and the rod is about 2200 mm. The device is tiltable and rotatable 360 degrees, 400 kg. The unit is also available in the rental. An ideal device for long narrow panels, eg roof glazing. In situations where the oval suction plate is not enough because you have to tilt the glass horizontally, and the glass bends too much, this is the right solution.
